- ▶ General overview

## ElektroLift 80 with AxosDrive

### Technical details at one look:

- ▶ No need to modify the frame construction
- ▶ Component parts can be easily fixed to the bed frame by means of standard screws
- ▶ Few parts, easy to assemble
- ▶ Less customer claims: the surrounding bed frame protects the adjustable system
- ▶ Cost reduction due to decreased transport volume
- ▶ Flat, compact as its height is only about 80 mm, therefore suitable for all bed bases
- ▶ It is possible to use the space underneath the bed base as the foot section can be raised manually
- ▶ Low standby power  $\leq 0,5$  W

Total height of the drive system is only approx. 80 mm.  
In spite of its flat construction the component parts and motors do not protrude from underneath the bed.

## General overview ElektroLift 80 with AxosDrive\*

Adjustment of head- and foot section by means of linear motors AxosDrive

Hand set cable
